

Turning Meta Ads Underperformance into €220K+ Revenue for a Luxury Lighting Brand

Period: July 5, 2025 – May 5, 2026 (10 months)

Target market: The Netherlands

Objective: Audit existing campaigns, identify shortcomings, and increase sales

Total ad spend: €40,280

Purchase value (revenue): €220,187.35

Results: 2,009+ purchases

Project overview:

The client sells luxury home lighting to Dutch consumers who value design and high-quality interiors. The brief was to conduct a thorough audit of the client’s existing Meta advertising, identify opportunities for improvement, and implement a clear, actionable plan across creative, targeting, campaign structure, and budget allocation to drive more purchases and improve ROAS.

Starting with an audit, not a rebuild

The client didn't come to me asking for a new campaign - they wanted to know what was wrong with the one they had. So before touching anything, I went through the account layer by layer: campaign structure, ad set logic, how the budget was actually split across campaign → ad set → ad, and whether the creative and targeting strategy matched what the metrics were showing.

I pulled CTR, CPC by top-performing locations, ROAS, hook rate, and audience breakdowns, and paid particular attention to two ratios that usually get overlooked: click-to-landing-page-view and landing-page-view-to-view-content. That second one is where I first suspected the problem wasn't purely a Meta problem — more on that later. I also spent time conducting competitor research to see how others in the category were framing their creative, which informed the audit report and a creative guideline I handed back to the client, along with an execution plan

Initial Optimization: Stabilizing the Account

The client needed time to produce new creative based on the audit's recommendations, so I didn't wait around for that. As an initial stage, I paused the two clearly underperforming campaigns to stop the budget bleed and put my attention into optimizing the one campaign still delivering results - updating the audience section and rebalancing budget distribution to carry the account until new material arrived.

Creative Refresh & Campaign Restructuring

Once the client provided new creative - images and video - I integrated it into the live campaign and paused whatever was still underperforming to rebalance the ad budget. This is also where I made the structural change that ended up mattering most: the campaign had been running on 2 ad sets, and I expanded that to 6, each one built around a specific product category rather than one broad audience. The whole setup ran on Advantage+ targeting, with tailored suggestions layered under each ad set. By the end of this phase, this was the highest-performing campaign in the entire account, and I scaled it gradually as the data supported it rather than pushing budget all at once.

The Challenge: A Sudden Performance Decline

About two months in, performance suddenly dropped. Out of the whole account, only 7 ads were still profitable - everything else had slipped into underperformance. My first instinct was to look inside Ads Manager, but the numbers pointed further downstream. I audited the client's product page directly and found real friction there: the page structure wasn't supporting the ads, the offer needed sharpening, there were no recent customer reviews to back up what the ads were claiming, and site speed was slow enough that it was likely costing conversions before people even had a chance to buy speed being something audiences (and Meta's delivery) are genuinely sensitive to.

I recommended restructuring the page, revising the offer, adding recent reviews, and fixing site speed, and in parallel started building new creative angles modeled on what the surviving 6 ads had in common.

The Turnaround: Optimization & Retargeting

Once the new creative angle went live alongside the page restructure and speed fix, performance began climbing again - gradually at first, then more steadily. This was also when I built out a proper retargeting layer that hadn't existed before: audiences for people who added to cart but didn't purchase, video viewers at 25%, 50%, and 75% watch thresholds, and view-content engagers. I launched new retargeting campaigns from these segments and replaced a few prospecting ad sets that were starting to decline with retargeting-based ones instead.

Continuous Optimization & Scaling

After establishing a strong campaign structure, the focus shifted to continuous optimization and profitable scaling. I monitored campaign performance daily, analyzing key metrics to identify growth opportunities and address performance fluctuations quickly.

Key optimization activities included:

- Performance monitoring and KPI analysis
- Strategic budget scaling
- Creative rotation to prevent ad fatigue
- Audience and placement optimization
- Budget reallocation to top-performing assets
- Retargeting refinement and ongoing creative testing

This disciplined optimization process allowed the account to scale profitably over the long term.

CAMPAIGN PERFORMANCE SUMMARY	
METRIC	VALUE
TOTAL PURCHASES	2,009
AVERAGE ROAS	4.52
AVERAGE COST PER PURCHASE	€25.19
TOTAL AMOUNT SPENT	€40,280.00
TOTAL PURCHASE VALUE	€220,187.35
TOTAL IMPRESSIONS	5,299,969
TOTAL REACH	1,034,461
TOTAL CLICKS (ALL)	205,182

Key Strategic Takeaways

This project demonstrates that sustainable Meta Ads growth is driven by strategy, continuous optimization, and data—not targeting alone. By combining campaign auditing, creative optimization, budget management, landing page improvements, retargeting, and ongoing testing, the account achieved consistent and scalable growth.

Result: 2,009+ purchases, €220,142 in revenue, and a 5.47x ROAS from €40,279 in ad spend over 10 months.

Core Success Factors:

- Strategic campaign auditing and restructuring
- Continuous creative testing and optimization
- Performance-driven budget allocation
- Conversion-focused landing page improvements
- High-intent audience segmentation and retargeting
- Ongoing monitoring, testing, and profitable scaling
