

Meta Ads Case Study: Scaling a UK Ecommerce Brand to £20,968 Revenue in 30 Days

Business Overview

Industry: Construction Materials & Tile Installation Solutions (Ecommerce)
Target Market: United Kingdom
Project Duration: 3 Months

Objective: Optimize the existing Meta Ads account to increase ecommerce sales through campaign restructuring, audience refinement, and continuous performance optimization.

Results (Last 30 Days)

- Ad Spend: £2,319
- Revenue: £20,968.85
- Purchases: 286
- Average ROAS: 12.43×

PHASE 1 — ACCOUNT AUDIT

Before making any changes, I reviewed the whole account. I looked at the campaign setup, how budget was spread out, which audiences performed best, which UK regions did best, age groups, and how well the account turned clicks into sales. Here is what I found:

- Budget was spread across weak campaigns instead of focused on the best ones
- The best-performing audiences were not getting enough budget
- Results were very different from one UK region to another
- Some ads were old and tired but still using up budget
- The campaign setup was holding back Meta's own ability to optimize

Before launching anything new, I first fixed the account's foundation.

Strategy 1: Fixing the Campaign Setup

Once the audit was done, I put a clear plan into action:

- Paused ads that kept underperforming
- Moved budget to the campaigns that were making money
- Fine-tuned which age groups we targeted
- Focused on the UK locations that performed best
- Improved how budget was split across campaigns
- Checked results every day to catch new opportunities

The goal at this stage was simple: get things running efficiently first, then build from there.

Strategy 2: Building a Stronger Path to New Customers

Not enough people knew the brand yet, and that was holding back growth. To fix this, I recommended short videos that introduce the brand and show what makes the product good.

Instead of aiming ads straight at purchases, I first aimed them at getting people to add items to their cart. This was done on purpose. It brought in more shoppers who were genuinely interested, and gave Meta's system better information to learn from. That, in turn, helped build stronger retargeting audiences — making the sales campaigns that came next work even better.

Strategy 3: Using Catalog Ads to Move Fast

The challenge: the client wanted faster growth, but making new video content would take time and slow things down. The fix: since the product catalog was already set up, I used it right away to get quick results.

I launched a Catalog Sales Campaign as a quick test, comparing two ways to target customers:

Ad Set A — Advantage+	Ad Set B — Manual Targeting
Advantage+ automated audience	Selected age ranges
Broad targeting	Relevant interest targeting
No manual interest input	Controlled demographic segmentation

Both ad sets ran comparable creative assets to isolate audience performance as the single variable.

Outcome: the Advantage+ audience gradually outperformed manual targeting, delivering the highest ROAS in the account for the period — validating that Meta's algorithm, fed strong first-party conversion signals, could identify high-value purchasers more efficiently than manual segmentation.

Strategy 4: Creative Optimization Through Competitive Research

With structure and funnel logic improved, creative quality became the next lever. Before producing new assets, competitor research was conducted across the Meta Ad Library, Instagram advertising, and direct UK industry competitors.

The goal was not replication but pattern recognition — identifying recurring messaging angles and visual styles among long-running, sustained-performance ads. These insights informed a refreshed set of image creatives, developed collaboratively with the client using AI-assisted design while preserving brand consistency. A limited-time promotional offer was also introduced to lift conversion rates.

The resulting campaign combined:

- Broad Advantage+ prospecting
- A 90-day Add-to-Cart retargeting audience

This combination outperformed the prior creative approach in purchase volume.

Continuous Optimization Framework

With four active sales campaigns generating conversions, the focus shifted from launching new campaigns to maximizing the efficiency of the existing account through daily operational discipline:

- Budget reallocation
- ROAS monitoring
- Creative fatigue analysis
- Audience performance reviews
- Placement optimization
- Scaling profitable campaigns
- Pausing declining ads before efficiency deteriorated

Metric	Result
Ad Spend	£2,319
Revenue	£20,968.85
Purchases	286
Average ROAS	12.43x
Reach	142,717
Impressions	498,199

BUSINESS IMPACT

Growth was driven by efficiency, not spend. The engagement demonstrated that meaningful ecommerce revenue growth can come from:

- Better campaign architecture
- Smarter audience segmentation
- Data-driven creative decisions
- Continuous, disciplined optimization
- Strategic budget allocation

This approach delivered strong ecommerce performance while maintaining an exceptional return on advertising investment.

KEY STRATEGIC TAKEAWAYS

- A comprehensive account audit often reveals greater growth opportunity than simply increasing budget.
- Campaign structure and budget allocation materially affect Meta's own optimization capabilities.
- Catalog campaigns can become high-performing revenue drivers when creative production is constrained.
- Competitive creative research should inform strategic direction, not be copied outright.
- Sustainable scaling comes from continuous optimization and disciplined testing – not from constantly launching new campaigns.
