

Scaling Qualified Lead Generation for a UK Custom Sportswear Brand Using Meta

Reporting Period: January 1, 2026 – July 28, 2026 (7 months)
Target Market: United Kingdom
Target Audience: Football & Rugby Club Decision-Makers (Club Owners, Coaches & Committee Members)
Objective: Improve lead quality and generate qualified inquiries from football and rugby clubs.
Total Ad Spend: £8,428.76
Results: 2,083 Landing Page Views | 950 Leads Generated
Industry: Custom Sports Teamwear & Bespoke Sports Apparel
Project Status: Ongoing

Execution Summary

The client is a UK-based provider of premium, nationally certified custom sportswear for sports clubs, schools, and academies. Their primary challenge was generating qualified inquiries, as many incoming leads did not match their ideal customer profile, reducing sales efficiency.

To identify the root causes, I conducted a comprehensive audit of the Meta Ads account, analyzing campaign structure, audience targeting, creative performance, lead quality, and historical data. Based on these insights, I developed a refined lead generation strategy and launched a new campaign structure focused on reaching decision-makers from football and rugby clubs actively seeking bespoke teamwear.

The strategy generated 950 leads and 2,083 landing page views with a total managed ad spend of £8,428.76, reaching 292,052 people and delivering over 1.04 million impressions. At the time of this case study, two lead generation campaigns remain active, demonstrating the strategy's sustained performance and scalability.

Results from 21 campaigns

Phase 1: Operational Account Audit:

I began by conducting a comprehensive audit of the Meta Ads account, evaluating the campaign structure, audience targeting, creative angles, messaging, lead quality, and historical campaign performance. This analysis identified key performance gaps, uncovered optimization opportunities, and established a data-driven foundation for the new growth strategy.

Phase 2: Audience Validation & Strategy Development

As the account had been inactive for a period, I first launched a traffic campaign to re-engage the account, validate audience responsiveness, and collect fresh engagement data before scaling lead generation campaigns. The insights from this phase helped refine the subsequent campaign strategy, including audience targeting, creative messaging, and campaign structure, ensuring the lead generation campaigns were built on validated performance data rather than assumptions.

Phase 3: Creative Strategy & Asset Development

Before launching the lead generation campaigns, I analyzed the highest-performing creatives from previous campaigns to identify the messaging, formats, and visual elements that resonated most with the target audience. I also conducted competitive research using the Meta Ads Library to evaluate competitor positioning, creative approaches, and advertising trends, helping identify opportunities to differentiate the brand while adopting proven creative principles.

Based on these insights, I developed new creative angles and provided the client with a comprehensive creative strategy, including ad concepts, hooks, messaging frameworks, voiceover scripts, text overlays, visual direction, and recommended filming environments. This ensured every creative asset was strategically designed to engage football and rugby club decision-makers and maximize campaign performance.

Phase 4: Phased Campaign Launch & Continuous Optimization

Following the research and validation phase, I adopted a phased launch strategy rather than targeting multiple audiences simultaneously. The first Meta Lead Generation campaign was launched exclusively for rugby club decision-makers using Meta Instant Forms, allowing audience quality, creative performance, and lead behavior to be evaluated without overlapping variables.

After validating performance and implementing daily optimizations across targeting, creatives, budget allocation, and lead quality, I expanded the strategy by launching a dedicated campaign for football club decision-makers. Separating each audience into its own campaign enabled more precise optimization, clearer performance insights, and greater control over budget allocation, ultimately improving lead quality and campaign scalability.

Phase 5: Lead Filtering & Quality Enhancement:

As the campaigns scaled, I continuously monitored lead quality and identified patterns in a small number of irrelevant and unqualified inquiries. Rather than simply accepting higher lead volume, I refined the qualification process to improve the overall quality of submissions.

To achieve this, I redesigned the Meta Instant Form by introducing additional qualification questions, including the club's estimated budget for premium teamwear, required delivery timeline, and purchase readiness. These questions acted as an initial screening layer, helping filter out low-intent prospects before form submission.

Alongside the form optimization, I refined the ad creatives and messaging based on ongoing A/B testing. The communication became more specific to football and rugby club decision-makers, clearly explaining who the offer was designed for and who it was not intended for. This allowed the creative itself to pre-qualify prospects, reducing irrelevant inquiries while attracting more qualified leads.

Phase 6: Scalable Campaign Execution & Performance Growth:

Following the creative and lead qualification optimizations, I launched a redesigned Meta Lead Generation campaign built on the insights gathered throughout the previous phases. To improve targeting precision and campaign control, the account was structured into dedicated ad sets for football and rugby clubs, allowing each audience to be optimized independently.

Each ad set featured multiple creative variations developed from historical performance data, competitor research, and ongoing A/B testing. Audience targeting, creative delivery, and budget allocation were continuously optimized based on live campaign performance to maximize lead quality and campaign efficiency.

This structured execution transformed the account into its highest-performing lead generation campaign during the reporting period, generating the largest volume of qualified leads while establishing a scalable framework for sustained campaign growth.

Phase 7: Data-Driven Campaign Expansion

As campaign performance matured, analysis showed that rugby had strong potential despite generating fewer leads than football. To scale this segment effectively, I launched a dedicated rugby Lead Generation campaign with refined creative angles and messaging while keeping the existing football and rugby campaign active.

This structure allowed better control over rugby-specific targeting, creative testing, and budget optimization. Now, two lead generation campaigns are active—one targeting football and rugby audiences, and another focused exclusively on rugby clubs to maximize qualified lead opportunities.

Phase 8: Performance Scaling & Continuous Optimization

After launching and expanding the lead generation campaigns, I continuously optimized performance through data analysis, budget adjustments, creative refinement, and audience improvements.

The focus shifted from initial testing to sustainable growth- scaling high-performing segments, improving lead efficiency, and maintaining campaign performance while both campaigns remained active.

Campaign Performance Growth:

The campaign continued to gain momentum throughout the reporting periods, demonstrating consistent improvement in lead generation. During January 1–April 30, 2026, the account generated 254 leads. In the following period (May 1–July 28, 2026), lead volume increased to 300 leads, delivering 46 additional leads and an overall 18.11% growth.

This steady upward trend reflects continuous account optimization and sustainable performance improvements over time. Rather than producing a short-term spike in results, the campaign maintained growth across consecutive reporting periods, demonstrating a scalable and data-driven Meta Ads strategy.

Key Strategic Decisions:

Built a structured Meta Lead Generation framework after identifying performance gaps within the existing account.
Used audience insights, creative testing, and performance data to improve targeting decisions and campaign efficiency.
Separated football and rugby audiences to gain better optimization control and identify segment-level opportunities.
Launched a dedicated rugby campaign after identifying growth potential within the rugby segment while maintaining the existing campaign structure.
Continuously optimized campaigns based on audience response, creative performance, lead quality, and cost efficiency.

Business Impact:

Transformed an inactive account into a scalable lead generation system.
Created a more controlled campaign structure that allowed independent optimization of different audience segments.
Improved the ability to identify high-potential audiences and allocate budget toward stronger opportunities.
Established a repeatable testing and scaling framework for future growth.
Generated a consistent pipeline of potential football and rugby club decision-makers.

Closing Insight

This campaign demonstrated that sustainable Meta Ads growth comes from structured testing, audience understanding, creative iteration, and continuous optimization—not from increasing budget alone. The final campaign structure created a scalable foundation for generating qualified leads across football and rugby segments.
